THYROID ULTRASOUND

Clinical History:

History of Hashimoto's. Rule out thyroid pathology.

Findings:

The thyroid gland is normal in size with the right lobe measuring 4.8 x 1.2 x 1.6 cm (SAG x AP x TRV) and the left lobe measuring 4.1 x 0.8 x 1.2 cm. The isthmus has a normal thickness of 0.2 cm AP.

The thyroid parenchyma is homogeneous. Currently there is no evidence to suggest Hashimoto's thyroiditis and there is normal vascularity in the gland.

[redacted]
Doppler evaluation demonstrates normal vascularity.

There is no regional lymphadenopathy.

Impression:

The thyroid gland is no longer heterogeneous and there is no evidence of active Hashimoto's thyroiditis.
